KantDesign

Hereby offsets 200 ton CO2e for emissions arising from business related activities 2023. The emissions are offset through tree planting in the project Trees for Global Benefits in Uganda. Alongside carbon sequestration, the trees grow into forest which provide valuable ecosystem services such as soil structure integrity, increased food security and a source of income for participating farmers. All species planted are native to Uganda which helps support biodiversity and boosts adaptation potential for the impacts of climate change.
